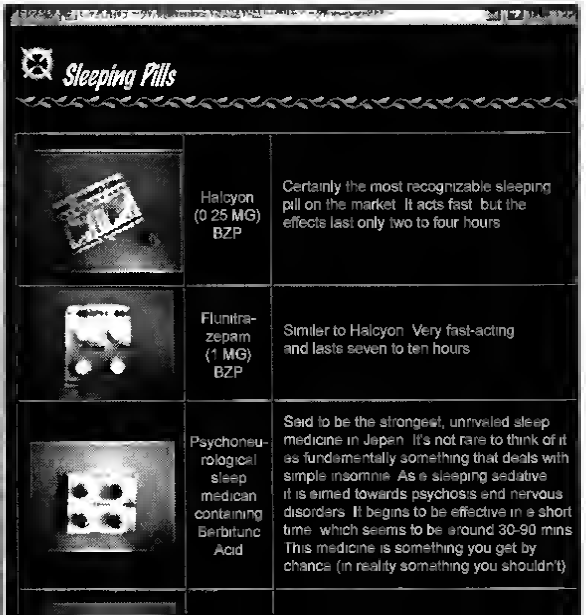
You don't just have narcotics!

>[Alice]: I'm warning you,
I only deal sleeping pills.
The other stuff comes from
mags or books.
What you're looking for
are sedatives.



Sleeping Pills
Halcyon (0.25 MG) BZP
Certainly the most recognizable sleeping pill on the market. It acts fast but the effects last only two to four hours
Flunitrazepam (1 MG) BZP
Similar to Halcyon. Very fast-acting and lasts seven to ten hours
Psychoneurological sleep medican containing Berbiturc Acid
Said to be the strongest, unrivaled sleep medicine in Japan. It's not rare to think of it as fundamentally something that deals with simple insomnia. As a sleeping sedative it is aimed towards psychosis and nervous disorders. It begins to be effective in a short time, which seems to be around 30-90 mins. This medicine is something you get by chance (in reality something you shouldn't)
